

Regiscope® Imaging Systems

Guest Cam – Visitor tracking identifies who's there.
Identify, control and document visitors and employees on your property.

Cargo Cam – Driver ID verification links cargo to driver.
Reduce theft by recording a full account of your shipping department's activities in a digital database.

Access Control – Manage access to property or assets.
Custom photo ID badges and central database provides individualized card key access to secure areas.

Surveillance Systems – Video systems incorporate digital storage.
Closed circuit TV cameras let you see and record events on your property.

Check-21 Systems – Near-instantaneous funds deposit.
Digital check imaging replaces sorting, transporting, presenting and reconciling paper checks with a faster, more reliable system.

"If it's a question of security, we have your solution."

Increase both Security and Profit with the Regiscope Cargo Cam

- Track Drivers and Deter Criminals
- Create Accurate, Evidentiary Quality Web-Based Records
- Quickly Issue Photo Driver & Employee Badges & more...

Regiscope® Driver Verification Solutions

Today's heightened awareness requires new solutions to control access to your business locations. The Regiscope Driver Verification System allows you to put a tight security net on your gated complex or building. At the same time, you can increase the flow of traffic without unnecessary delays. You can control or monitor who is in the building, when they arrived, when they left and who invited them.

- **Track Drivers and Deter Criminals**

In just a few seconds, the system records a digital image of every driver. Simultaneously, it records their ID and documentation. It optionally prints out a custom driver's badge and logs them in and out of your facility.

- **Increase Profit While Increasing Security**

Using a smaller security staff to register drivers faster translates into increased profits. Controlling traffic flow more efficiently translates into increased security. To save even more time, employees can pre-register drivers online or using your company's network.

- **Create Accurate Records**

Multi-format reader extracts data encoded on government-issued ID cards and automatically populates database. Stored information can be used to create web-based activity reports for security staff review. Reports including digitally watermarked images can be printed or sent to management or law enforcement agents as needed.

- **Easy to Learn, Easy to Use**

The system is intuitive and simple to use. Only minimal training is required for your security personnel. It all operates with the press of a button.

Regiscope® Report Center

The Regiscope Report Center (RRC) allows authorized personnel to access secure database information and produce activity reports from a local or remotely located server.

The diagram shows several Cargo Cams connected to a server. In turn, the server communicates with local, LAN, or internet-connected Regiscope Report Centers. Local and remote servers can be interconnected as needed. The flexible system also allows drivers to be pre-registered remotely.
